

**General Information: Why is CFU Important?**

**Academic skill:** Visual Closure

**Curricular area:** Reading Readiness

**Consequences if ability is not developed:** Will not see word completely; susceptible to word reversals

**Strengths if ability is well developed:** Excellent comprehension of visual details

**Summary:** All tasks that involve figural comprehension will be affected by visual closure. These tasks range from letter, symbol, and word recognition to reading charts, graphs, and schematics. This is a fundamental intellectual ability.

**SOI Training**

This module contains thirteen exercises. Each exercise is progressively more difficult. This module continues the visual closure training. The “figures” in this module are alphabetic letters—singly and in words. The objective is to apply the visual closure abilities developed in CFU-I to letter and word recognition.

**computer module also available on personalized CD**

**Instructions:** Your job is to find all the letters that match the sample letters in the boxes with the heavy lines. You will need ten colors for this task. Begin with the first row. Work across the row. When you find a letter that matches the first sample, circle it with the suggested color. Look for others that match. When you have checked each letter, go to the next row. Repeat the procedure throughout the page.

**Review:** If there is difficulty, use a sheet of paper to cover up all letters below the row you're working on. If there is still difficulty, then, cover all the squares except the one you are looking at (using a sheet with a cutout the size of one small square).
